

SUMMARY

- 13+ years of experience in designing, developing, customizing, implementing, and supporting Microsoft Dynamics CRM/Dynamics 365 CE, Power Platform, and Azure-based enterprise solutions across Healthcare, Banking, Financial Services, and Retail domains.
- Experience in CRM Solution Architecture, Microsoft Dynamics 365 CE, Dynamics GP, General Ledger (GL), Accounts Payable (AP), Accounts Receivable (AR), Customer Engagement, Sales & Service Automation, Business Process Flows (BPF), Security Roles, Customization, System Integration, Data Migration, API Development, Azure Functions, CI/CD, ALM, DevOps, and end-to-end CRM lifecycle management.
- Expertise in building rich and responsive UI/UX solutions using JavaScript, jQuery, HTML, and CSS by developing dynamic forms, interactive dashboards, custom business interfaces, and optimized client-side logic that streamlined General Ledger (GL), Accounts Payable (AP), and Accounts Receivable (AR) business processes within Dynamics GP and Dynamics 365 environments.
- Strong experience in solution architecture, enterprise process automation, API integrations, and large-scale data modernization using Python, Power Platform, Azure, Microsoft CRM, Dynamics 365 CE & F&O, Dynamics GP, enabling optimized GL, AP, and AR operations while improving financial and e-commerce business processes.
- Experienced in executing large-scale data migration, cleansing, mapping, deduplication, and transformation initiatives involving Dynamics GP, General Ledger (GL), Accounts Payable (AP), and Accounts Receivable (AR) data using SSIS, SSRS, SSAS, Management Reporter, and T-SQL while developing CRM automation workflows using n8n and event-driven architectures.
- Hands-on expertise working across Azure DevOps, TFS/ALM, JIRA, ServiceNow, Lifecycle Services (LCS), Smart Assist, and Dynamics GP to support project governance, release management, incident resolution, environment administration, and full lifecycle delivery for CRM, ERP, GL, AP, and AR implementations.
- Extensive experience in JavaScript and FetchXML development to create data-driven forms, interactive dashboards, asynchronous REST integrations, optimized DOM operations, and scalable reporting frameworks supporting Dynamics GP, General Ledger (GL), Accounts Payable (AP), Accounts Receivable (AR), CRM, and enterprise financial operations.
- Expertise implementing enterprise-grade security frameworks including Role-based Security, Field-level Security, Workflow permissions, governance policies, and compliance controls ensuring secure access to sensitive GL, AP, and AR financial records managed within Dynamics GP and Dynamics 365 applications.
- Delivered complex CRM, Dynamics GP, Dynamics 365 F&O, and AX customizations including server-side extensions, middleware integrations, custom workflows, plugins, and high-performance .NET applications while designing API-first architectures integrating General Ledger (GL), Accounts Payable (AP), and Accounts Receivable (AR) with enterprise applications.
- Extensive Power Platform expertise developing Power Apps (Canvas and Model-driven), Power Automate workflows, Power BI dashboards, Power Pages portals, and Dataverse solutions extending Dynamics GP, GL, AP, and AR functionality using scalable low-code application frameworks.
- Designed and implemented Power Apps and Power Automate integrations with Dataverse, Dynamics 365 CRM, and Dynamics GP to automate General Ledger (GL) postings, Accounts Payable (AP) invoice approvals, Accounts Receivable (AR) collections, notifications, escalations, and multi-system financial data synchronization.
- Expertise configuring and supporting Microsoft Dynamics 365 F&O, AX Retail POS, MPOS, CPOS, and Dynamics GP environments supporting enterprise finance, General Ledger (GL) accounting, Accounts Payable (AP) processing, Accounts Receivable (AR) management, omnichannel commerce, and customer operations.
- Managed multi-environment CRM, Dynamics GP, and Dynamics 365 F&O deployments using Azure DevOps and Lifecycle Services (LCS), automating build generation, release pipelines, code promotion, environment provisioning, and deployment governance for global implementations supporting GL, AP, and AR business functions.
- Implemented observability and monitoring frameworks using Azure Monitor, Application Insights, DevOps dashboards, Plugin Trace Logs, Audit History, and Dynamics GP diagnostics to improve proactive issue detection, troubleshooting, and performance for General Ledger (GL), Accounts Payable (AP), and Accounts Receivable (AR) transaction processing.
- Designed enterprise Power Platform ecosystems using Power Apps, Power Automate, Power BI, Dataverse, Microsoft Dynamics 365, and Dynamics GP, implementing scalable architecture patterns, financial automation frameworks, and optimized application performance supporting General Ledger (GL), Accounts Payable (AP), Accounts Receivable (AR), budgeting, reconciliation, and enterprise financial operations.
- of Dataverse data models, relational schemas, business rules, automation layers, and reusable solution architectures that supported enterprise-scale applications with minimal technical debt and enhanced maintainability.
- Deep expertise integrating SAP S/4HANA ERP and external enterprise systems using SAP BTP, Fiori, PI/PO, CPI, BRF+, DRF, IDoc, and OData while aligning solutions with SAP best practices and standardized business processes.
- Experienced In robust Data Replication Framework (DRF) solutions enabling seamless synchronization between SAP MDG and SAP S/4HANA while extending capabilities through SAP BTP, custom enhancements, and Fiori application development.

- Expertise leveraging Azure DevOps for complete application lifecycle management including backlog planning, Git/TFVC branching strategies, CI/CD implementation, automated builds, release orchestration, and deployment automation.
- Enhanced customer and operational data quality through implementation of de-duplication frameworks, validation pipelines, cleansing methodologies, governance standards, and master data management across CRM and ERP landscapes.
- Built high-throughput client-server communication frameworks using HTTP, TCP/IP, MSMQ, asynchronous programming, multithreading, C#, and .NET to optimize application responsiveness and support enterprise transaction volumes.
- Extensive experience utilizing Knowledge Base, Smart Assist, and Lifecycle Services (LCS) for solution documentation, troubleshooting, governance, performance optimization, and operational excellence across Dynamics implementations.
- Executed end-to-end migration initiatives from AX 2009/2012, CRM 2013/2016, SAP, Oracle, and flat-file systems into Dynamics 365 CE & F&O omnichannel platforms using structured transformation, validation, and reconciliation processes.
- Implemented enterprise Power Platform governance frameworks including DLP policies, RBAC, managed solutions, environment strategies methodologies, and secure deployment practices ensuring scalable and compliant operations.
- Built advanced ETL workflows using Azure Data Factory and Power Automate to automate secure movement of enterprise data between cloud and on-premises systems with logging, monitoring, and resilient error-handling mechanisms.
- Proficient in handling complex migrations from AX 2009/2012, CRM 2013/2016, Oracle, SAP, and flat files to cloud-based Dynamics 365 CE and F&O environments through detailed mapping, cleansing, validation, and transformation strategies.
- Strong hands-on experience with C#, .NET, ASP.NET MVC, X++, PowerApps, WCF, REST/SOAP APIs, and SDK-based development delivering custom modules, integrations, plugins, and enterprise-grade business applications.
- Implemented enterprise compliance and regulatory frameworks including HIPAA, SOX, FINRA, HITECH, and CMS by enabling audit trails, secure transactions, retention policies, governance controls, and end-to-end regulatory adherence.

SKILLS: Dynamics 365 CRM & F&O (2024), AX 2009/2012, Deltek Vision / VantagePoint (Project Lifecycle Management, WBS Setup, Billing Terms, Project Stages, Resource & Task Automation, Reporting), FSC (Financial Supply Chain), C# (.NET 7/6), .NET Core, ASP.NET MVC & Web Forms, X++ (AX/D365), JavaScript, HTML5, jQuery, FetchXML, REST/SOAP APIs, WCF Services, Dynamics SDK & Plugins, SQL Server 2019/2022 (T-SQL, PL/SQL, Stored Procedures, Views, Triggers), SSIS, SSRS, SSAS, Power Apps (Canvas & Model-Driven), Power Automate, Power BI (Desktop & Service), AI Builder, Dataverse, Azure Logic Apps, Azure Data Factory, Azure Service Bus, Azure DevOps & Pipelines, Azure Key Vault, App Services, LCS, SAP/Oracle/Salesforce/Guidewire/EHR Integrations, High-Availability Infrastructure (AOS Clusters, SQL Always On, Load Balancing), Enterprise Data Architecture, Data Governance, Workflow & Business Process Automation, Omnichannel Customer Service, Enterprise Reporting & Analytics.

PROFESSIONAL EXPERIENCE

KAISER PERMANENTE- UPPER MARLBORO, MD

April 2023 – Present.

Lead CRM Dynamics 365/ Power Platform Developer

- Spearheaded enterprise-wide CRM and ERP transformation initiatives by leading end-to-end architecture, technical strategy, solution delivery, and governance across Dynamics 365 CE, Power Platform, D365 F&O, and Azure ecosystems. Directed scalable implementation models and ensured secure, compliant, and high-performing solutions across multi-entity healthcare operations.
- Architected and delivered Dynamics 365 CE solutions across Sales, Customer Service, Field Service, and Marketing modules using C#, .NET, ASP.NET, JavaScript, SQL, Power Automate, and Power BI. Enabled process standardization, automation, and operational efficiency across enterprise business functions.
- Implemented Azure-enabled Dynamics 365 solutions integrating C#, .NET, ASP.NET MVC, SQL Databases, APIs, Power BI models, Power Automate flows, Azure Data Factory pipelines, Azure Service Bus queues, and Azure Logic Apps to enhance enterprise automation and ERP connectivity.
- Implemented environment lifecycle management for multiple Azure instances, ensuring compliance, audit readiness, and automated deployments. Developed integrations between D365 SCM, EMR/EHR systems, and healthcare applications.
- Developed Finance and Supply Chain modules, including GL, AP, AR, Bank, Inventory, Procurement, PIM, using X++, SQL, MorphX, C#, .NET, and Dynamics 365 F&O omnichannel frameworks.
- Developed BRF+ rules and validation frameworks in SAP MDG to enforce data quality standards, significantly reducing duplicate and inconsistent master data, while designing robust integration frameworks between SAP MDG, SAP CRM, SAP ERP, and external enterprise applications.
- Implemented secure healthcare workflows and enterprise data governance standards aligned with HIPAA, GDPR, and organizational compliance requirements. Applied controlled data access, validation mechanisms, and secure transaction processing across business applications.
- Defined and implemented enterprise security architecture including role-based access controls, segregation of duties, Dataverse security models, and environment governance frameworks. Strengthened platform security posture and reduced compliance risk.
- Designed and automated vendor lifecycle and procurement workflows within Dynamics 365 Supply Chain Management environments. Improved procurement approvals, supplier collaboration processes, and operational throughput.
- Led and mentored cross-functional development teams by establishing architecture standards, conducting code reviews, and promoting engineering best practices. Improved solution quality, maintainability, and technical delivery effectiveness.

- Built scalable enterprise integration frameworks using Plugins, SDK, Custom APIs, and event-driven architecture patterns across CRM and ERP environments. Enabled extensible, reliable, and maintainable business solutions.
- Managed release planning, production deployment execution, and post-production support activities across multiple application landscapes. Ensured smooth go-live execution and minimized business disruption.
- Developed advanced Dynamics 365 F&O customizations including Plugins, JavaScript, SDK extensions, business rules, and workflow automation. Delivered secure and optimized healthcare-focused business functionality.
- Architected enterprise integration solutions leveraging Azure Logic Apps, Azure Functions, Service Bus, Power Automate, Dual-Write, OData, and custom connectors. Enabled bi-directional synchronization across Dynamics 365, SAP, Oracle, Salesforce, and external enterprise systems.
- Delivered retail and channel integration solutions connecting POS systems, Channel Databases, catalogs, and operational reporting platforms. Integrated Azure analytics and Power BI reporting capabilities for enterprise visibility.
- Designed and implemented Power Platform solutions using Canvas Apps, Model-Driven Apps, Dataverse, and Power Automate. Automated CRM F&O, ERP, and Office 365 workflows resulting in improved business productivity.
- Established enterprise-grade Azure and Power Platform security governance including Key Vault integration, SQL permissions, Dataverse access models, and compliance controls. Ensured secure application delivery and data protection.
- Designed scalable plugin frameworks using C#, .NET, Azure Functions, and Dynamics 365 execution pipelines including Pre/Post events and extensible architecture patterns. Improved maintainability, extensibility, and application performance.
- Delivered enterprise automation and modernization initiatives utilizing .NET 8, ASP.NET MVC, JavaScript ES6+, SQL, SSIS, SSRS, SSAS, Power BI, and Azure services. Accelerated business process transformation and reduced manual operations.
- Established enterprise analytics and monitoring frameworks using Power BI, SSRS, Azure Application Insights, logging standards, exception handling mechanisms, and governance controls. Enabled proactive monitoring, actionable reporting, and operational excellence.
- Established logging, monitoring, and error-handling standards across Azure and Power Platform using Application Insights, retries, exception frameworks, and governance controls.

THE GOLDMAN SACHS Inc. - JERSEY CITY, NJ
Senior Microsoft CRM ERP Developer

December 2018 - March 2023.

- Implemented omnichannel banking engagement solutions using Microsoft Dynamics 365 CRM, Unified Service Desk (USD), Power Apps, Power Pages Portals, JavaScript, SQL, Azure Logic Apps, and CRM/ERP engagement models to support customer onboarding, retail banking, loan servicing, KYC, AML, and digital banking experiences.
- Designed enterprise banking integration architecture using KingswaySoft SSIS, SSRS, SSAS, Azure Data Factory, Azure Logic Apps, Azure Service Bus, C#, .NET, SQL Database, APIs, and Power Automate, enabling high-volume synchronization between Dynamics 365 CRM F&O, Core Banking Systems, payment gateways, SWIFT, treasury, and regulatory platforms.
- Built enterprise Power Apps Canvas Apps, Model-Driven Apps, Dataverse, C#, .NET, SQL Database, Power Automate, APIs, and Power BI dashboards for retail banking, relationship management, customer service, branch operations, and executive banking analytics with secure role-based access.
- Played a key role in modernizing AX 2012 R3 to Dynamics 365 Finance & Operations, performing X++ code remediation, banking process redesign, regulatory enhancements, omnichannel capabilities, and integration with CRM, payment systems, and financial reporting platforms.
- Designed enterprise banking supply-chain and financial operations using Dynamics 365 SCM along with F&O, Advanced Warehouse Management, C#, .NET, SQL Database, APIs, Power Automate, supporting secure asset management, banking inventory, procurement workflows, compliance controls, and operational governance.
- Developed custom Dataverse entities, relationships, business rules, plugins using C#, .NET, ASP.NET, SQL Database, APIs, and Power Automate, supporting banking customer profiles, loan management, deposits, payments, compliance validation, and financial master data governance.
- Engineered enterprise CRM and Banking ERP integration frameworks connecting AX 2009/2012, Dynamics 365 Finance & Operations F&O, Azure, SharePoint, Office 365, SSIS, SSRS, SSAS, SQL Database, C#, .NET, APIs, and Power Automate, ensuring secure banking data exchange and regulatory compliance.
- Customized Dynamics 365 CRM using C#, .NET, ASP.NET, JavaScript, HTML5, jQuery, FetchXML, REST/SOAP APIs, SQL Database, SSIS, SSRS, SSAS, and Power Platform, delivering automated banking workflows, customer servicing, financial approvals, and enhanced user experience.
- Developed responsive Power Apps Canvas Apps, Model-Driven Apps, C#, .NET, SQL Database, X++, APIs, Power Automate, and Power BI reporting for branch banking, customer onboarding, loan approvals, and executive KPI monitoring.
- Managed daily development within Dynamics 365 Finance & Operations sandbox environments, ensuring banking application stability, secure code deployment, Microsoft best practices, regulatory compliance, and successful delivery across Dev, Test, UAT, and Production environments.
- Developed banking financial modules including General Ledger, Accounts Payable, Accounts Receivable, Budgeting, Treasury, Procurement using X++, .NET, SQL Database, SSIS, SSRS, SSAS, integrating CRM through APIs and Power Automate for end-to-end financial operations.
- Delivered Dynamics AX Banking CRM-ERP integrations for customer accounts, payment processing, banking products, financial reconciliation, scheduler jobs, using X++, C#, .NET, SQL Database, APIs, SSIS, SSRS, SSAS, and Power Automate, ensuring secure transaction processing.

- Designed and optimized SQL Server databases, stored procedures, views, triggers, T-SQL queries, SQL Database schemas, supporting C#, .NET, ASP.NET, APIs, SSIS, SSRS, SSAS, improving banking application performance, reporting accuracy, and transaction processing efficiency.
- Led executive workshops with business stakeholders, compliance teams, treasury, operations, and banking leadership to gather requirements, define master data strategy, prepare technical architecture, and integration specification
- Delivered enterprise banking reporting using Power BI, SSRS, SSAS, SSIS, SQL Database, C#, .NET, APIs, and PL/SQL, providing real-time dashboards for lending, treasury operations, customer portfolios, and executive decision-making.
- Managed Dev, Test, UAT, and Production environments using Power Automate, C#, .NET, SQL Database, SSIS, SSRS, SSAS, implementing CI/CD deployment pipelines, release governance, environment automation, and secure banking application lifecycle management.
- Built Power BI dashboards with SQL Database, APIs, C#, .NET, Power Automate, enabling banking executive with customer acquisition, loan portfolios, transaction volumes, branch performance, operational KPIs, and regulatory compliance metrics.
- Designed AI Builder solutions with Power Automate, ASP.NET, C#, .NET, SQL Database, automating banking document processing, KYC verification, fraud detection, loan classification, predictive analytics, and intelligent approval workflows.
- Designed end-to-end Dynamics 365 Finance & Operations banking solution architecture, aligning Finance, Treasury, Procurement, Lending, Payments.
- Automated enterprise deployment pipelines using Lifecycle Services (LCS), SSIS, SSRS, SSAS, Power Automate, C#, .NET, SQL Database, streamlining banking ERP/CRM deployments, environment provisioning, release automation, and governance across multiple environments.
- Standardized enterprise banking data architecture using Dataverse, Power Apps, SQL Database, APIs, C#, .NET, Power Automate, SSIS, SSRS, SSAS, and Power BI, ensuring secure master data management, regulatory reporting, customer data governance, and enterprise-wide consistency.
- Designed hybrid enterprise integration pipelines using Azure Data Factory, SSIS, SQL Database, Power Automate, APIs, C#, .NET, SSRS, and SSAS, integrating CRM, ERP, Core Banking, Treasury, and Business Intelligence platforms for unified banking analytics.
- Built enterprise integrations connecting Dynamics 365 CRM with Azure DevOps (TFS), JIRA, ServiceNow, SharePoint, Sitecore, using C#, .NET, ASP.NET, SQL Database, APIs, Power Automate, SSIS, SSRS, and SSAS, improving ITSM processes, governance, and banking project delivery.
- Designed enterprise banking reporting frameworks using FetchXML, Power BI, SSRS, SSAS, SQL Database, C#, .NET, APIs, and Power Automate, delivering real-time insights into customer engagement, lending performance, compliance metrics, treasury operations, and executive financial reporting.

OMADA HEALTH- SAN FRANCISCO, CA
Senior Microsoft Dynamics 365 CE Developer

FEBRUARY 2017 – NOVEMBER 2018.

- Led the design and delivery of Microsoft Dynamics 365 and Power Platform solutions in a healthcare SaaS environment, working closely with product, clinical operations, and engineering teams to build secure, scalable, and compliant applications that supported day-to-day business and clinical workflows.
- Led the design and end-to-end delivery of Dynamics 365 CE and Power Platform solutions within a HIPAA-regulated healthcare SaaS environment, owning solution architecture, technical decisions, and delivery execution to ensure scalability, performance, security, and regulatory compliance.
- Designed solutions aligned with HIPAA and PHI protection standards, implementing least-privilege access, role-based security models, data segregation, and audit controls across CRM, Dataverse, and integrated systems to meet internal governance and external audit requirements.
- Optimized enterprise application performance by tuning SQL queries, X++, C#, .NET, ASP.NET, JavaScript logic, Power Automate flows, and Power BI models, enabling faster response times and reliable processing of high-volume healthcare data along Dynamics 365 SCM with healthcare applications, ERP systems, vendors, and logistics providers.
- Designed secure authentication, exception handling, logging, and data transformation frameworks using C#, .NET, REST APIs, and Power Automate, ensuring fault tolerance, traceability, and compliant data movement across systems.
- Delivered module-level CRM customizations across Sales, Service, Marketing, and healthcare-specific workflows, translating complex business and clinical processes into user-friendly, high-performance CRM solutions while maintaining compliance.
- Built and governed Dataverse data models, including custom entities, relationships, and business rules, to securely manage patient-related, operational, and reporting data with a focus on data integrity and scalability.
- Architected Power Apps (model-driven and canvas) tightly integrated with Power Automate to automate approvals, case management, notifications, and operational workflows, ensuring PHI protection and secure user access.
- Designed and implemented Azure-based integration architectures using Logic Apps, Azure Functions, Service Bus, and APIs to synchronize data across CRM, ERP, SQL, HR, and finance systems with secure, reliable, and auditable data handling.
- Developed enterprise analytics solutions using Power BI, SSRS, and SSAS, applying data masking, row-level security, and access controls to deliver compliant insights to clinical operations, leadership, and business teams.
- Implemented CI/CD and ALM pipelines in Azure DevOps for Dynamics 365, .NET, and Power Platform solutions, enforcing approval gates, environment separation, version control, and auditability to support enterprise governance.
- Supported the AX 2012 R3 to Dynamics 365 Finance & Operations upgrade, focusing on cloud readiness, code remediation, architectural redesign, and compliance alignment with modern D365 standards.

- Provided L2/L3 production support for CRM, integrations, and reporting platforms, proactively diagnosing and resolving issues to maintain high availability for critical healthcare operations.
- Collaborated closely with security, compliance, legal, and IT teams to validate that platforms met internal controls, risk assessments, external audits, and regulatory standards throughout the solution lifecycle.
- Partnered with product, clinical operations, Sales, and Customer Success teams to translate healthcare workflows into scalable technical solutions that improved adoption, efficiency, and data accuracy.
- Defined and enforced Power Platform governance standards, including environment strategy, connector usage, DLP policies, naming conventions, and solution packaging to ensure secure and sustainable platform growth.
- Integrated Power Automate, REST APIs, Azure (PaaS/IaaS), Git/GitHub, Azure DevOps, CI/CD, and JIRA for secure enterprise delivery. Designed reporting and analytics frameworks utilizing Power BI and SCM data sources to track inventory performance, procurement KPIs, and operational metrics.
- Actively participated in Agile delivery, including Sprint Planning, Backlog Grooming, JIRA tracking, SIT, and UAT, ensuring solutions met functional, technical, and compliance expectations.
- Acted as a trusted senior technical advisor, guiding CRM and Power Platform strategy, driving adoption, and supporting long-term scalability within a healthcare SaaS ecosystem.

ZULILY – SEATTLE, WA
Dynamics 365 Consultant

April 2015 - JANUARY 2017.

- Designed and implemented CRM-to-ERP integrations using C#, .NET, and Power Automate to enable seamless data synchronization between Dynamics 365 CRM and enterprise systems. Integrated with AX 2012, SAP, Oracle, and legacy platforms while ensuring secure, reliable, and high-performance data exchange across business applications.
- Developed and optimized Dynamics 365 CRM plugins using C# and .NET by leveraging the event execution pipeline to enforce complex business rules and validations.
- Enhanced system functionality through real-time processing and seamless integration with external enterprise applications.
- Collaborated closely with Sales, Service, Marketing, and Operations teams to understand business processes and identify automation opportunities. Translated functional requirements into scalable CRM solutions that improved operational efficiency and enhanced user productivity.
- Built secure WCF services along with REST and SOAP APIs to support enterprise-wide integrations between Dynamics 365 CRM and external systems. Improved data consistency, reduced manual intervention, and ensured reliable communication across business applications.
- Designed and implemented automated nightly ETL pipelines using SQL Database, Power Automate, and .NET to synchronize contacts, orders, and lead information. Optimized data processing performance while maintaining high levels of accuracy and consistency across integrated systems.
- Designed dynamic approval workflows in Dynamics 365 using Power Automate, incorporating conditional logic, C# triggers, notifications, routing, and escalation mechanisms. Improved business process compliance, reduced manual approvals, and accelerated decision-making across departments.
- Partnered with IT operations and support teams to provide L2/L3 production support for Dynamics 365 applications and integrations. Diagnosed and resolved plugin failures, workflow exceptions, integration issues, and SQL inconsistencies to ensure uninterrupted business operations.
- Supported CRM adoption and governance initiatives by working closely with business users to establish best practices and standardized processes. Delivered user guidance, improved data quality, and encouraged consistent utilization of Dynamics 365 capabilities across departments.
- Designed and optimized SQL Database schemas along with Entity Framework-based data access layers to improve application scalability and performance. Enhanced query execution, reduced database latency, and maintained accurate, reliable enterprise data.
- Contributed to legacy system modernization initiatives by managing end-to-end data migrations using Power Automate, .NET scripts, and SQL-based ETL processes. Ensured secure data transformation, minimized migration risks, and maintained data integrity throughout the transition.
- Delivered Microsoft Dynamics AX and Dynamics 365 Finance & Operations customizations using X++, integrated with C#, .NET, SQL Database, and Power Automate. Developed scalable business solutions that streamlined financial and operational processes across enterprise applications.
- Facilitated requirement gathering workshops with Sales, Service, Marketing, and Operations stakeholders to understand business needs and define CRM solutions. Designed scalable Dynamics 365, Power Automate, ASP.NET, and X++ solutions aligned with organizational objectives.
- Provided L2/L3 production support for Dynamics 365 environments by resolving workflow failures, plugin exceptions, SQL database issues, and integration errors. Performed root cause analysis and implemented preventive measures to improve overall system reliability.
- Built responsive ASP.NET web portals and business applications integrated with Power BI dashboards to improve reporting and data visibility. Enabled business users to access actionable insights through intuitive interfaces and interactive visualizations.

- Developed responsive web pages and enterprise portals using ASP.NET, HTML5, CSS3, JavaScript, jQuery, and Bootstrap with SQL Database integration. Enhanced user experience, improved application responsiveness, and integrated Power BI reports for better business decision-making.

ZIONS BANCORPORATION

Power Automate Developer

JANUARY 2013 -MARCH 2015.

- Integrated Microsoft Power Platform solutions with SharePoint Online, Outlook, Microsoft Teams, Excel Online, and Microsoft 365 services using Power Automate connectors. Enabled seamless data synchronization, automated communication, and enhanced collaboration between business teams through end-to-end workflow automation.
- Designed Power Automate cloud flows within the Microsoft Power Platform to automate multi-level approval processes, notifications, document routing, and business workflows. Configured dynamic approval chains and automated escalations, ensuring faster decision-making and improved compliance with banking standards.
- Developed and maintained automated business workflows using Microsoft Power Platform, primarily Power Automate, to streamline daily banking operations and eliminate repetitive manual tasks.
- Designed scalable cloud flows for business processes, improving operational efficiency, reducing turnaround time, and enhancing overall process reliability across departments.
- Built automated email alerts, reminders, and notification systems using Power Automate within the Microsoft Power Platform to track business-critical activities. Leveraged Power Automate, SharePoint lists, and Microsoft Forms to digitize manual approval processes and improve audit traceability.
- Collaborated closely with business stakeholders to gather automation requirements and translated manual business operations into digital workflows using Microsoft Power Platform solutions. Conducted process analysis, identified automation opportunities, and delivered efficient Power Automate solutions aligned with business objectives.
- Monitored, tested, and optimized Power Platform workflows by analyzing execution history, identifying bottlenecks, and improving flow performance. Reduced workflow execution failures through continuous optimization, connector management, and efficient flow design practices.
- Assisted in integrating Microsoft Power Platform with Microsoft 365 applications and external business systems to support enterprise-wide automation initiatives. Utilized standard connectors, APIs, and secure authentication methods to enable seamless business process integration.
- Created and maintained comprehensive workflow documentation, process flow diagrams, technical specifications, and user guides for Microsoft Power Platform solutions. Ensured proper knowledge transfer, simplified future enhancements, and supported ongoing maintenance activities.
- Worked closely with QA teams, business analysts, and end users to validate Power Platform automation solutions before production deployment. Performed unit testing, User Acceptance Testing (UAT), defect resolution, and workflow validation to ensure high-quality business process automation.
- Provided production support for Microsoft Power Platform solutions by troubleshooting failed Power Automate flows, resolving connector issues, and implementing timely fixes.
- Participated in Agile software development practices while delivering Microsoft Power Platform automation projects. Contributed to sprint planning, backlog refinement, daily stand-ups, sprint reviews, and retrospectives to ensure timely delivery of automation solutions.
- Ensured all Microsoft Power Platform automation solutions complied with organizational security policies, governance standards, and banking regulatory requirements. Implemented secure access controls, data protection measures, and best practices for Power Platform governance.

EDUCATION

Bachelor of Engineering in Computer Science: SATI – 2011
